# Student Scheduling in UniTime

Tomáš Müller

# Student Scheduling

## What is Student Scheduling?

- Enrollment of students into classes in a way that maximizes the ability for students to get the courses they need

## Why needed?

- To ensure that students will be able to get the courses they need in a multi-section environment
- Students who come early may block later students from being able to get the courses they need
- Getting a workable schedule can be a tedious process for a student

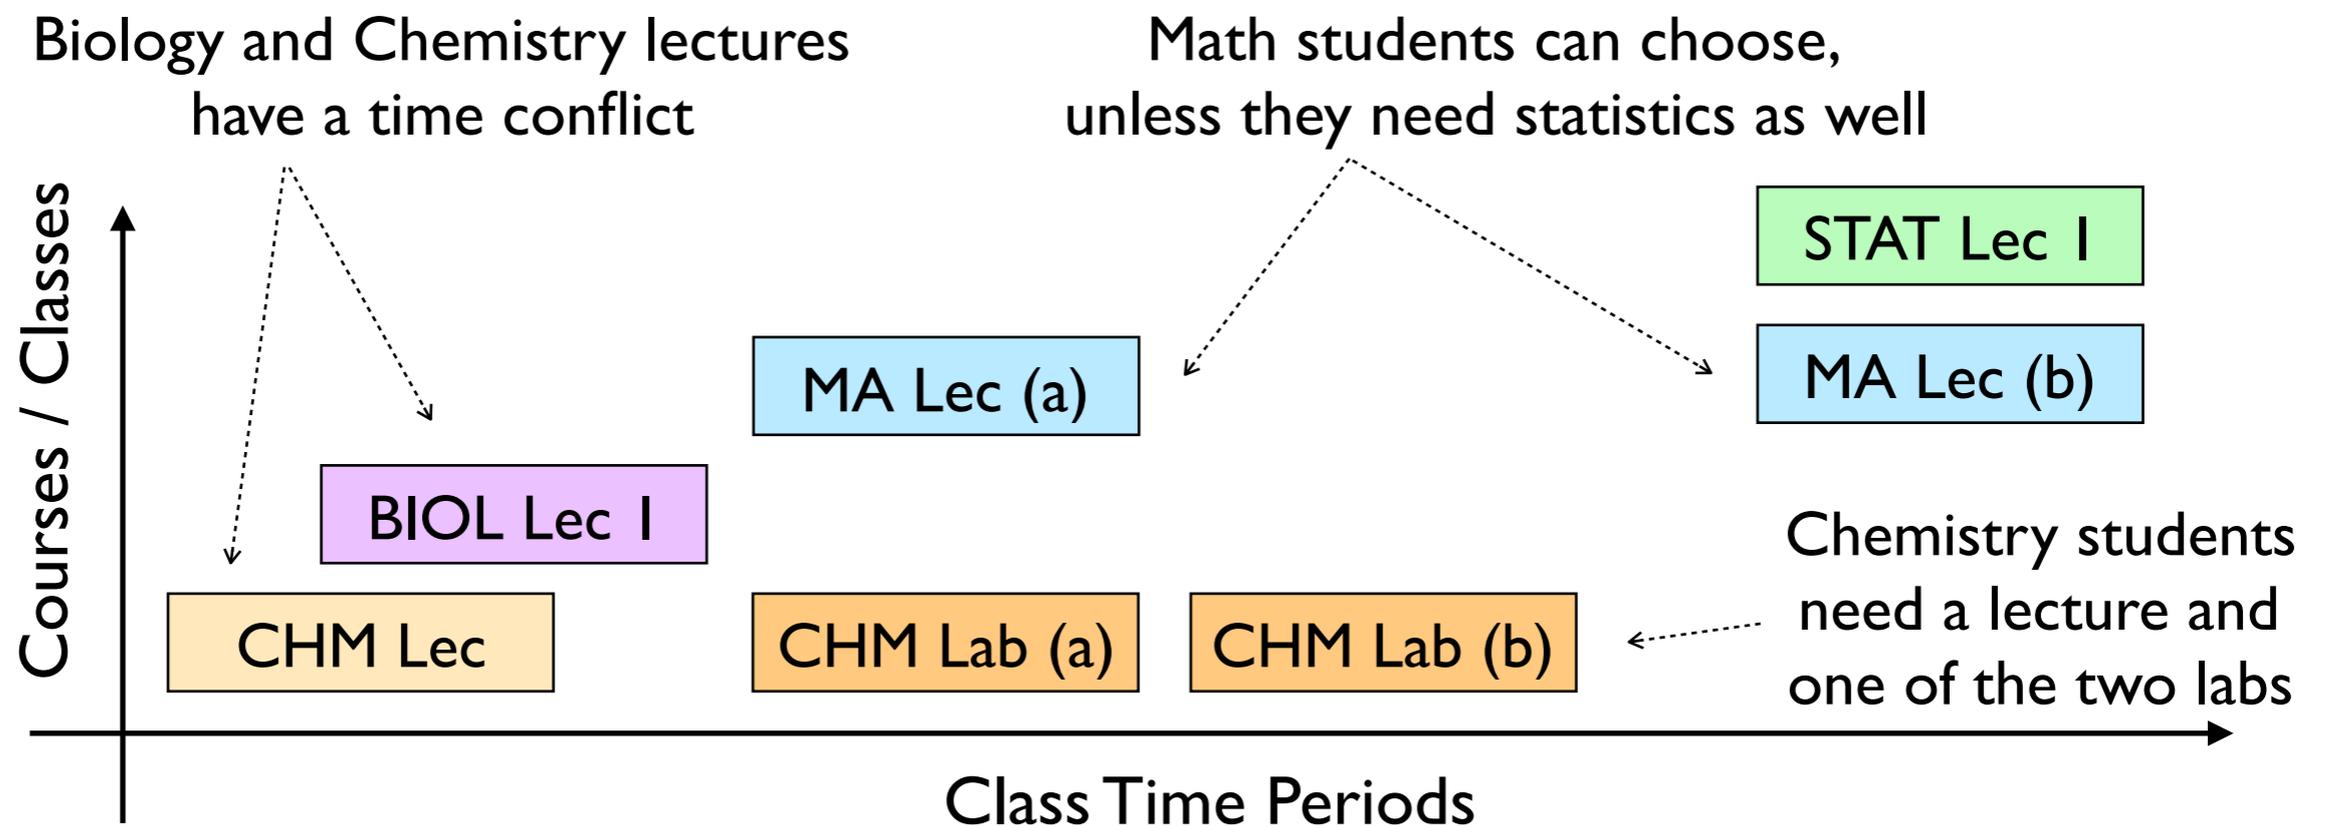

## Goal

- Student fills in course requests, including alternatives, free times, etc.
- System provides a schedule that meets student needs
- Students have the ability to modify their schedule

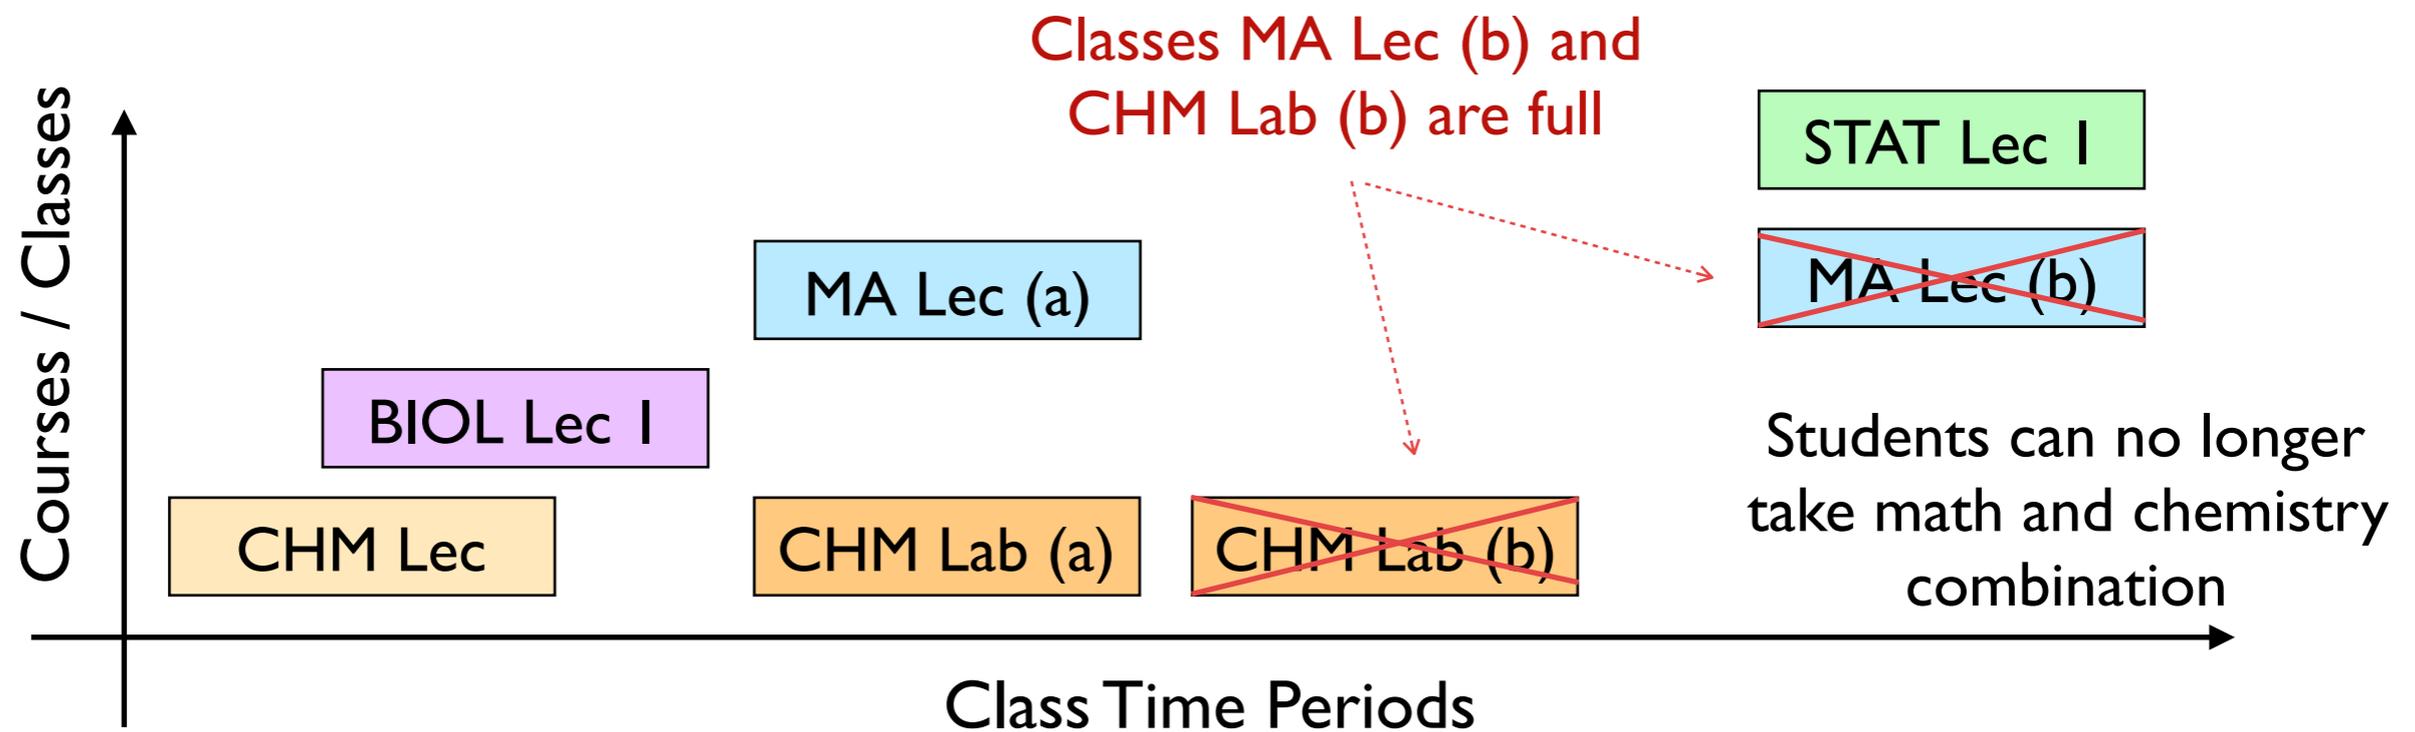

## A student cannot take a combination of courses

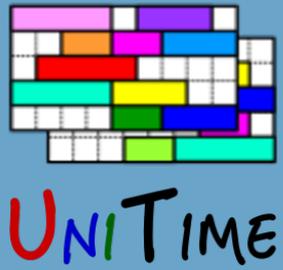

- Because there is a (time) conflict
  - *Classes are offered at overlapping times or one after the other in rooms that are too far apart*
- Or, there is not enough space in a non-conflicting combination of classes

## A student cannot take a combination of courses

- Because there is a (time) conflict
  - *Classes are offered at overlapping times or one after the other in rooms that are too far apart*
- Or, there is not enough space in a non-conflicting combination of classes

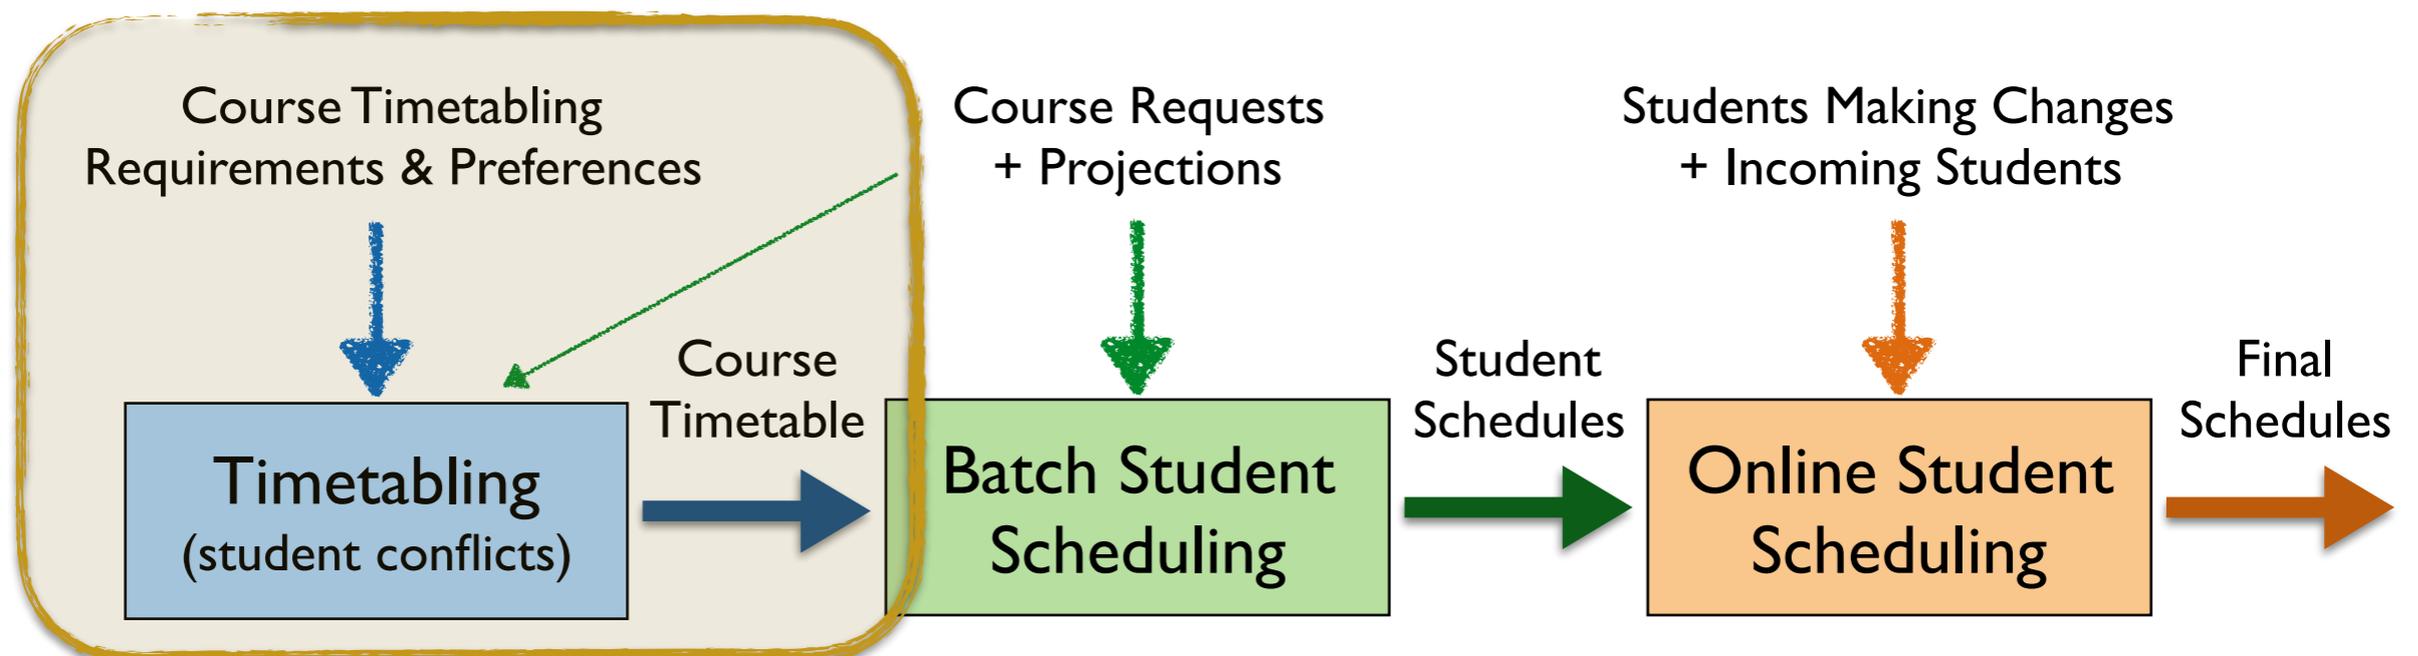

# Student Scheduling Process

## Step I: Course Timetabling

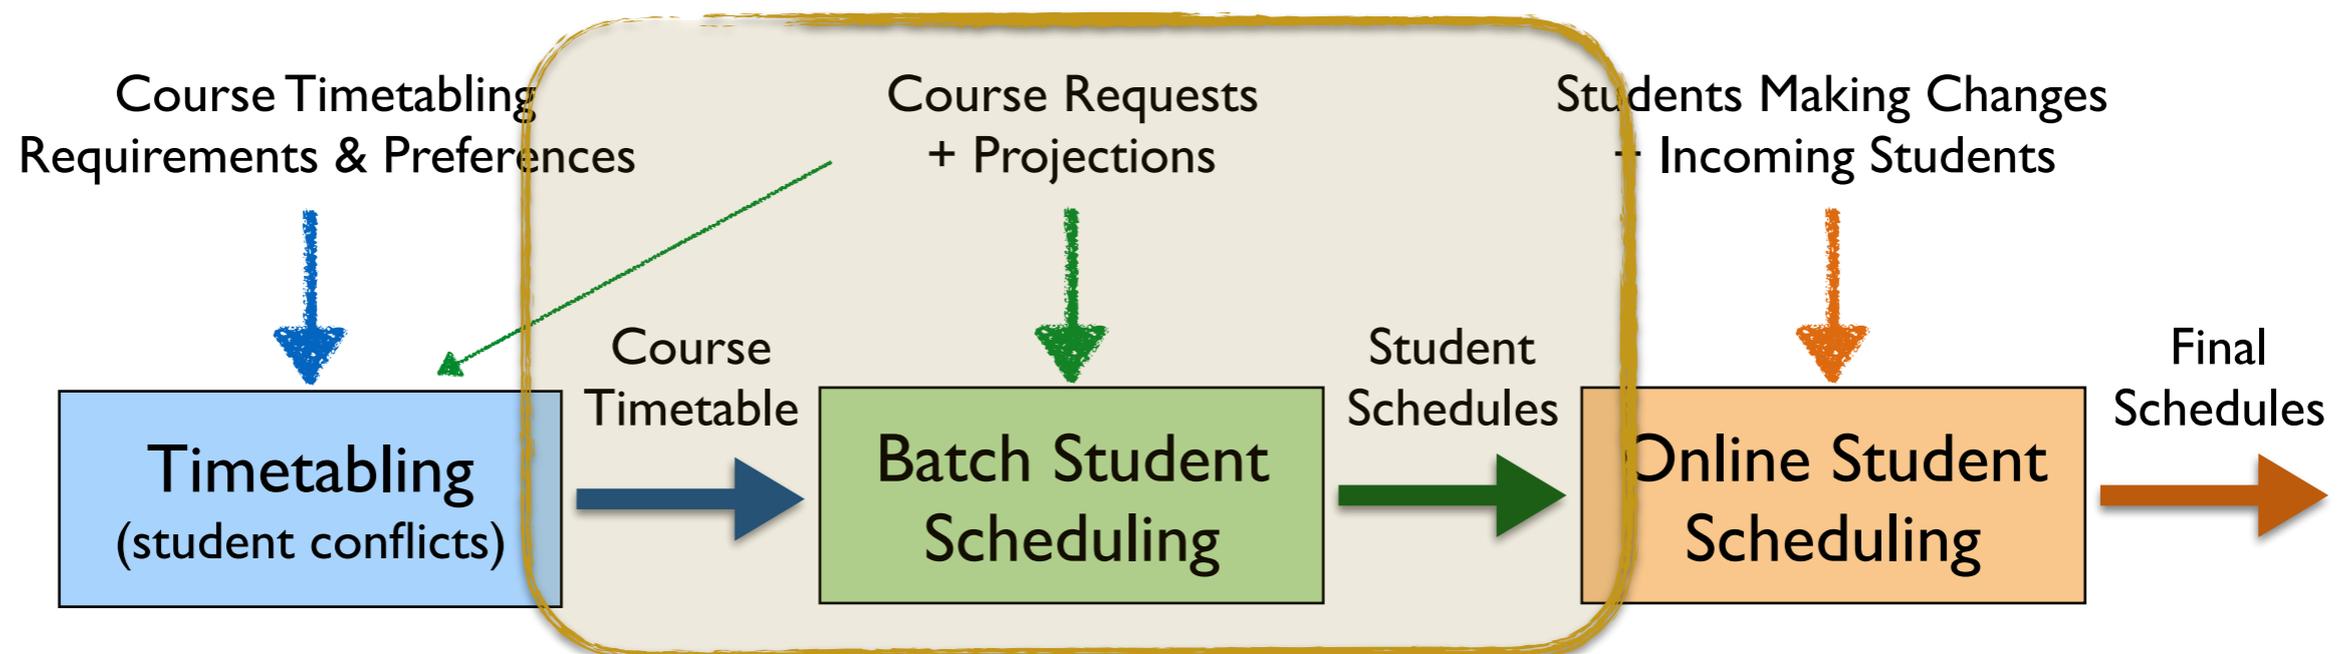

- Minimizing student conflicts together with faculty preferences
  - Last-like student course enrollments
  - Curricula (e.g., *list of courses for each program and year*)
  - Courses Requests (pre-registration)
  - A combination of these

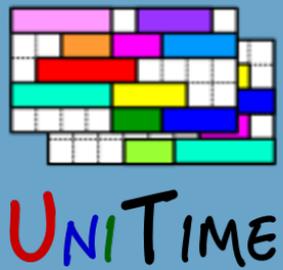

# Student Scheduling Process

## Step 2: Batch Student Scheduling

- After a timetable is produced
- Using pre-registrations and student course demand projections
- To provide students with initial schedules
- An optimization process, using the (student scheduling) solver
- It is possible to iterate
  - With the ability to keep already enrolled students unchanged or to minimize changes

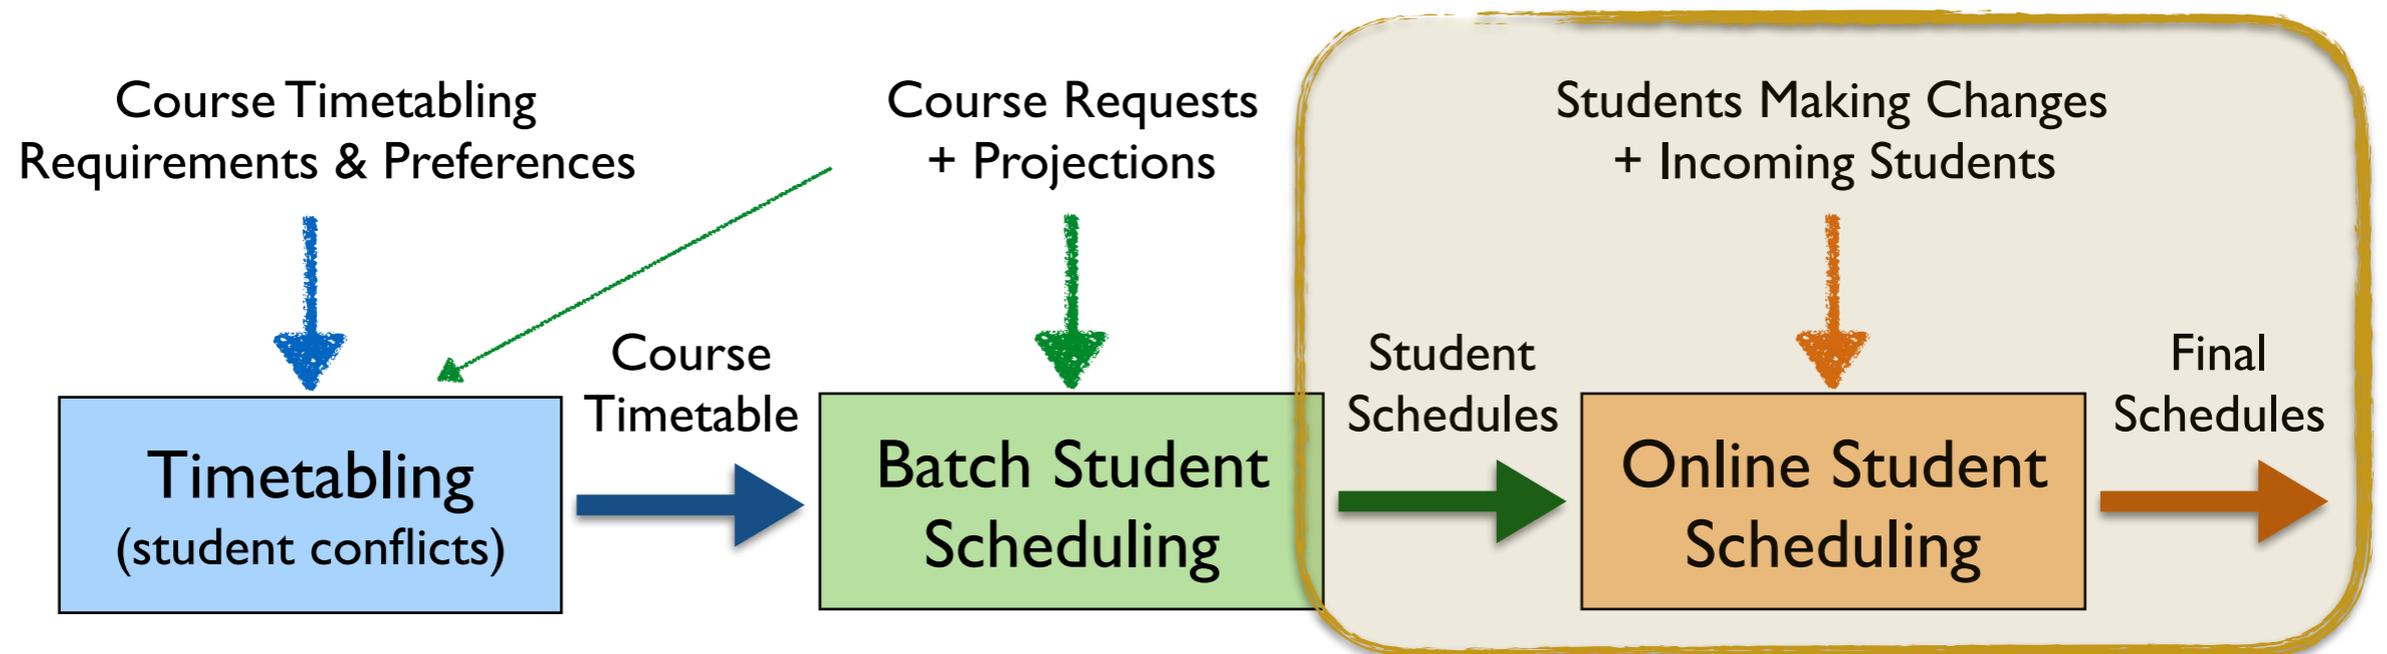

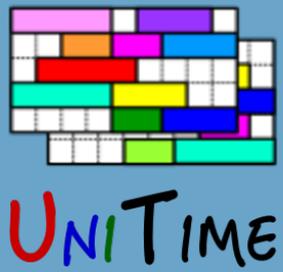

# Student Scheduling Process

## Step 3: Online Student Scheduling

- Students without pre-registration can enroll online (*incoming freshmen and students that did not register*)
- All students can make adjustments to their schedules
- Automatically reserve space in sections based on projections
- Solver provides suggestions
  - Ordered by their quality, with the ability to filter through

# Course Requests

## Course Requests

- Each requested course can have up to two alternatives (or it can be wait-listed)
- There can also be additional alternate course requests to get the desired number of courses
- There can be free time requests in the list

## Classes are organized in a course structure

- Intuitive data entry and display of classes and their requirements
- Helps to define a way how students can enroll into the course
- Additional relations can be derived from the structure
- Used to build a class timetable

								---Preferences---	
	Limit	Date Pattern	Minutes per Week	Time Pattern	Time	Room	Distribution	Instructor

# Student Enrollment

## Student enrollment into the course

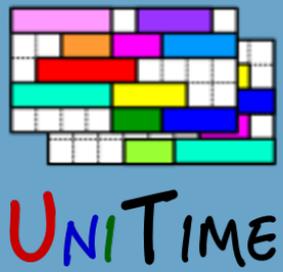

- One class of each instructional type (subpart) of a configuration
- Follow the nesting relations, if defined
- No time and limit conflicts, respecting reservations

- + Reservations
- + Other Constraints

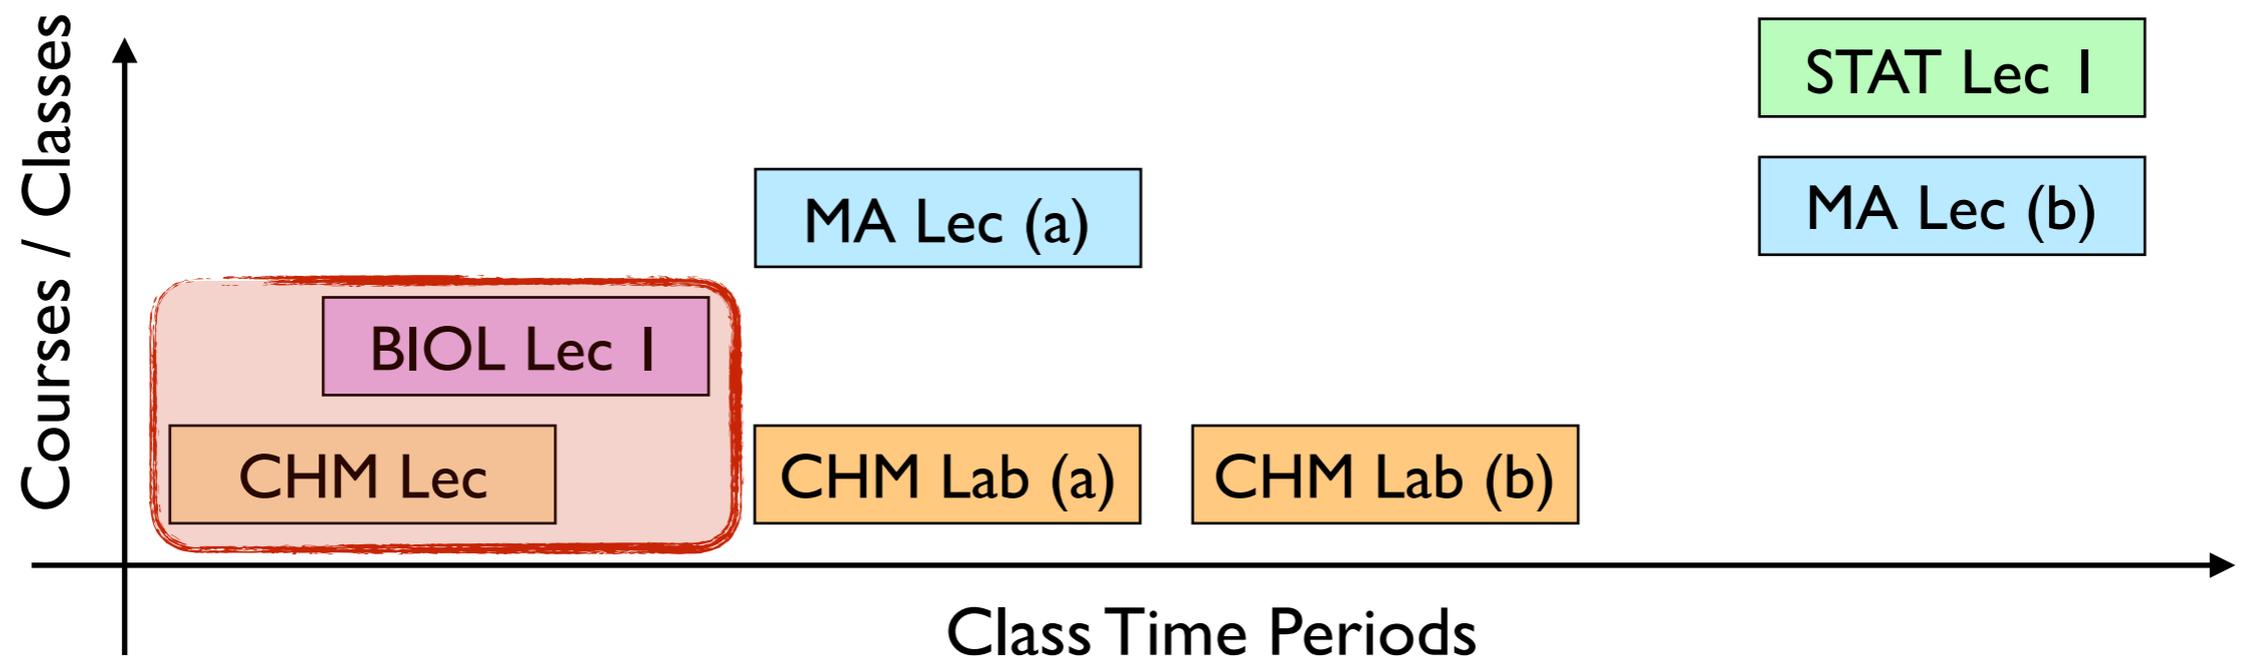

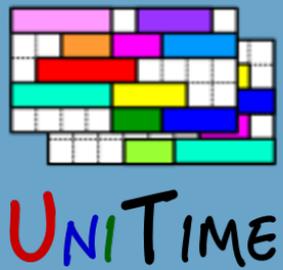

# Student Constraints

## Time Conflicts

- Student time conflicts are in general not allowed
- There are, however, a few exceptions
  1. Some parts of a course may allow for time overlaps
  2. Certain class combinations may ignore student conflicts
  3. A student may be given an individual reservation
- If allowed, the solver tries to minimize the overlapping time in this case
- Online: If a class moves in time, conflicting students are rescheduled

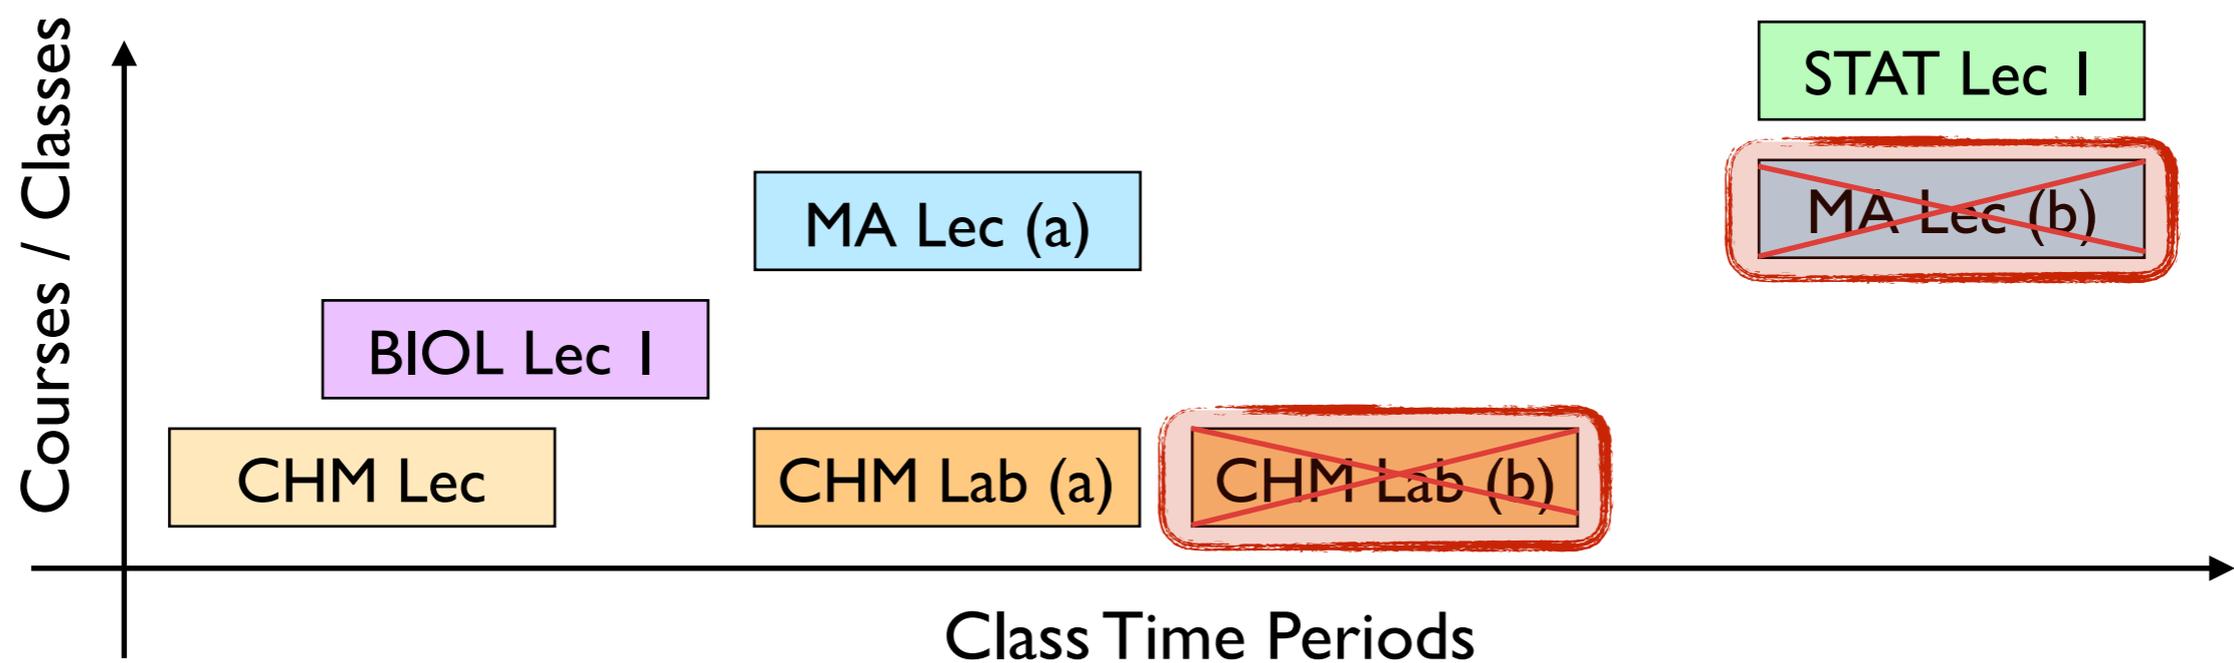

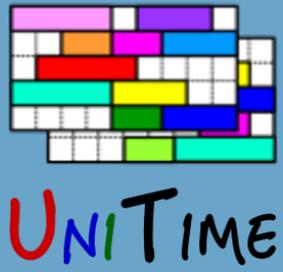

# Student Constraints

## Limits

- There are class limits, configuration limits, and reservation limits
- A class may be disabled for student scheduling (*acts as zero limit*)
- If a limit is decreased, the existing students are left in the class
- Online: If a class is cancelled, enrolled students may be automatically rescheduled

# Reservations

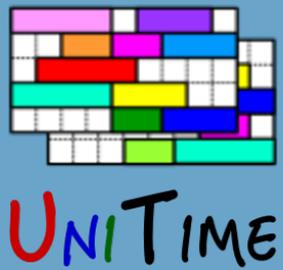

## Reservations

- Reservations can be used to restrict certain parts of an offering to a certain group of students
- Type: Individual, Student Group, Curriculum, Course
- A reservation has a limit (can be unlimited) and may have a deadline

## Additional Properties

- Reservation priority: individual before student group, etc; if same type more restrictive first
- Some reservations must be used (individual, student group), even when there is some unreserved space in the course
- Individual reservations allow for signing up over the limit and for a time conflict (with other course)
- A course may require reservations (even if there would be unreserved space available otherwise)

# Student Schedule

## Student Schedule

- As complete as possible (alternatives are used when a course is not available)
- Priorities are used to resolve conflicts
- The amount of overlapping time is minimized (where allowed)
- Distance conflicts are minimized (consequent classes too far)

# Student Schedule

## Student Schedule

- As complete as possible (alternatives are used when a course is not available)
- Priorities are used to resolve conflicts
- The amount of overlapping time is minimized (where allowed)
- Distance conflicts are minimized (consequent classes too far)

## Additional Criteria

- Avoid over-expected classes
- Keep previous schedule
- Section balancing
- Avoid arrange hour classes
- Keep students of the same group together (batch)

[Add/Drop Courses](#)    [Rearrange Schedule](#)    [Current Registration](#)    [Submit Schedule](#)    [Print](#)

# Online: Expectations

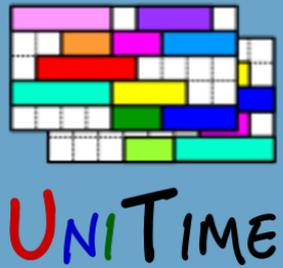

## Expectations

- During batch sectioning, we can use projected demands to
  1. Fill in the remaining space (requested vs. projected)
  2. Keep students off the class combinations that will be needed later
  3. Use this information to track the expectations for each class during online scheduling
- Expectations are like reservations, except fully automatic
- Typical Example: 1st year students are not around for the batch run

## During Online Student Scheduling

- Students are diverted from classes that are over-expected (expected + enrolled  $\geq$  limit)
- Expectations are kept up to date as the new students are coming in

# Online: Automated Wait-Listing

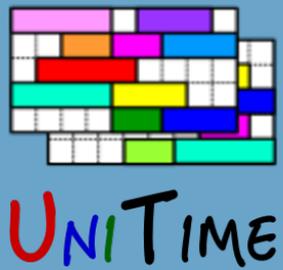

## Wait-Lists

- Wait-lists are defined on the offering level (for the whole course)
- Getting on the list:
  - When entering course demands: student can choose between providing an alternative or getting on a wait-list
  - If a student is dropped from a course due to a course change
- Deadlines also apply to wait-lists

## Wait-List Processing

- Order based on time stamp, reservation priority, the reason for getting on the list, etc.
- Wait-Lists are automatically processed:
  1. When there is a new space in the course (e.g., a class opens up)
  2. When there is a course change
- UniTime is not allowed to change other courses of a student

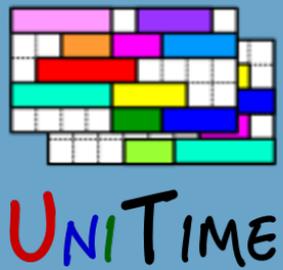

# Online: Course Locking

## Course Management During Online Scheduling

- An offering must be locked before an operator can make a change
- When an offering is locked, no enrollment changes are allowed (*students can drop the course, but any other change will put them on a wait-list*)
- Once the course is updated, it can be unlocked
  1. All existing enrollments of the offering are validated
  2. Students with a change that does not break any constraint are notified
  3. Students with a conflict are removed and put on the top of the wait-list
  4. Wait-list is processed and the affected students are notified (*it tries to minimize changes for students from the previous step*)
- The Class Assignment page (that is used to move a class) shows how many students will have a conflict with a new time placement

# Other Features

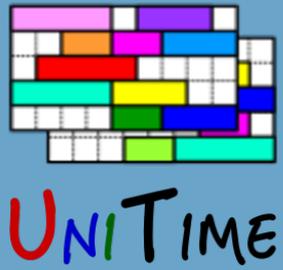

## Enrollment Deadlines (Online)

- Online student scheduling allows for add, drop, and change deadlines
- Defined in the number of weeks after the class starts
- Defaults are set on the academic session (for the whole term), but can be overridden on a particular course

## Distribution Constraints

- **Linked Sections:** Certain classes (of different courses) may be linked together
  - If a student is taking both courses, taking one class in a link means that he must take the other class of the link
- **Ignore Student Conflicts:** Certain classes (of different courses) may allow to ignore student time conflicts
  - Useful, e.g., when two courses share a lecture
  - The overlapping time is minimized in this case (if possible)

# Other Features

## Email Notifications

- Students are automatically notified when they have a change in their schedule

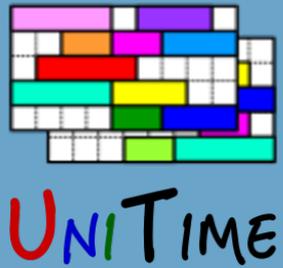

## Consents

- Some courses may need a consent (of a department or an instructor)
- UniTime lets the student in, consent is either given or the enrollment is rejected

## Monitoring

- Scheduling Dashboard page shows how the courses are filling up as well as how the students are progressing
- There is also extensive logging that can be used for tracking issues and showing enrollment history of a student
- There are also various reports that can be very handy  
(*showing student time and availability conflicts, class balancing, etc.*)

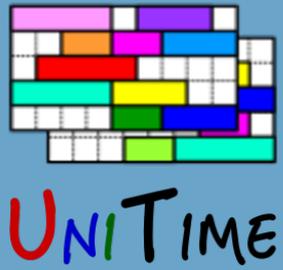

# Other Features

## More Features

- Departmental, Instructor, and Advisor roles  
(to give consent and to make changes on behalf of a student)
- Student Status
- Mass Cancel
- Ability to Customize
  - Student eligibility check and enrollment (Ellucian Banner XE)
  - Retrieve degree plan (Ellucian DegreeWorks)
  - Email template, retrieve course details, etc.
- Ability to run batch solver for subsets of students
- ...

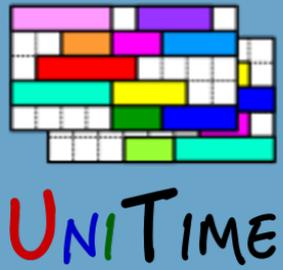

## Current State

- Batch student scheduling is only used for a few groups of students (Management, Learning Communities, etc.)
- Students are using the Scheduling Assistant to get a schedule
- At the moment they can choose whether to use Banner or UniTime
  - No automated waitlisting and no expectations
  - **Students have time windows and limits are manually updated instead**
- We are using the Banner XE Student API to synchronize the changes
  - Banner does all the necessary eligibility checking
- We have added recently an integration with degree planning tool (DegreeWorks)

## Vision

- Build the course timetable based on the individual student degree plans
- Use the batch solver to provide all students with an initial schedule
- Still debating how to deal with incoming freshmen

# New in UniTime 4.2

## Already Implemented

- Responsive design
- Ability to provide more than two alternative courses
- Preferences on instructional methods and/or individual sections
- Keep students of a group together (batch)

## Work in Progress

- Avoid times when a student is teaching (for Teaching Assistants)
- ...

# Short Demo

Of the Student Scheduling Assistant...

# Conclusion

## Student Scheduling in UniTime

- Maximize ability for the students to get the courses they need
- Offers a lot of functionality
- Can be used in many different ways (batch, online, or a combination)
